

DETERGENT

DESCRIPTION

DRILLING DETERGENT is a drilling detergent for all fluid types. It consists of a specially formulated mixture of surfactants and surfactants to reduce surface tension and reduce problems with shale during drilling with water-based mud.

GENERAL PHYSICAL CHARACTERISTICS

Appearance	Amber liquid
SG @ 20°C	1.00 – 1.10 mg/ml
Viscosity @ 20°C	Less 100 CPS
pH	7.5 – 8.5
Flash Point	Above 65 °C
chilling temperature	Below 0 °C

APPLICATION

The amount of material required depends on the complexity of the problem. Start by adding 7L/m³ and increase the dose as needed.

DRILLING DETERGENT is used in all types of systems mainly in between drilling phases. In the case of high concentrations of calcium and magnesium, the system should be pretreated with soda ash to increase the effectiveness of DRILLING DETERGENT.

PRECAUTIONARY MEASURES

Avoid contact with eyes, skin and clothing. DRILLING DETERGENT is classified as a harmless product. Standard precautions should be taken when handling chemical materials. If caught in the eye, rinse with water for 15 minutes and seek medical attention.

PACKING

DRILLING DETERGENT is supplied in 200L barrels.
