

DESCRIPTION

FORTIHIB is designed to inhibit clays and shales during well drilling.

MODE OF APPLICATION

The product is supplied ready-made and injected directly into the drilling fluid during preparation.

It is recommended to use drilling fluid in a concentration of 5 to 20 kg/m³.

ADVANTAGES

- reduces clay production in drilling fluid
- prevents the formation of cavities on the well walls
- reduces the likelihood of omentation
- Compatible with most water-based drilling fluid systems

BASIC PHYSICAL PROPERTIES

Appearance	Yellow to black liquid with odor
Solubility in water	Fully
Specific gravity at 20°C	1000-1100
Pour point	-35 °C
Flash point in open crucible	80 °C
pH of 5% solution	7-8

PACKAGE

FORTIHIB is supplied in 200 liter metal drums.
